REF **428-002**

Actual product may differ from photos

We wanted to create an unobstructive system, for the quick installation of garden equipment, including center-pole umbrellas.

Our French team invented an innovative ground clip system (Quick Fixation System), which we have patented worldwide. It comprises an anchoring base, to be screwed or embedded into the ground, and a series of Gard&Rock equipment that can be clipped sturdily into it and removed as needed.
